

PRESS RELEASE

Patterning Technologies Limited (PTL) is pleased to announce the launch of its new MaskMaster print platform.

Using PTL's proprietary inkjet printing technology, MaskMaster has been designed specifically for the direct write patterning of etchmask. It will be of particular interest to the Photo-Chemical Machining sector. Replacing the need for photo-tools, reducing the number of processing steps and increasing operating flexibility MaskMaster provides real economic benefits.

Chief Executive Officer, Rob Haslett said "This is a significant event for PTL in providing access to our unique technology. PTL is an exciting business with many applications for its technology spanning the electronics, displays and medical sectors as well as photo-chemical machining".

Further enquiries should be directed to info@pattech.com.

Please visit our website www.pattech.com for further information and machine specifications.
